ManyClasses Feedback Timing Study

Current production proof

Proof ID: PRF-02

Built at: 2026-08-26T09:18:00+08:00

Manuscript source: AM-2026-0147-v5

Production state: author review copy; Figure 3 component inserted from late replacement attachment.

Abstract

This production proof is provided for component-level consistency review before the coupled proof and deposit lock.

Study design

The proof retains the accepted design description and stable panel identifiers used by production and repository systems.

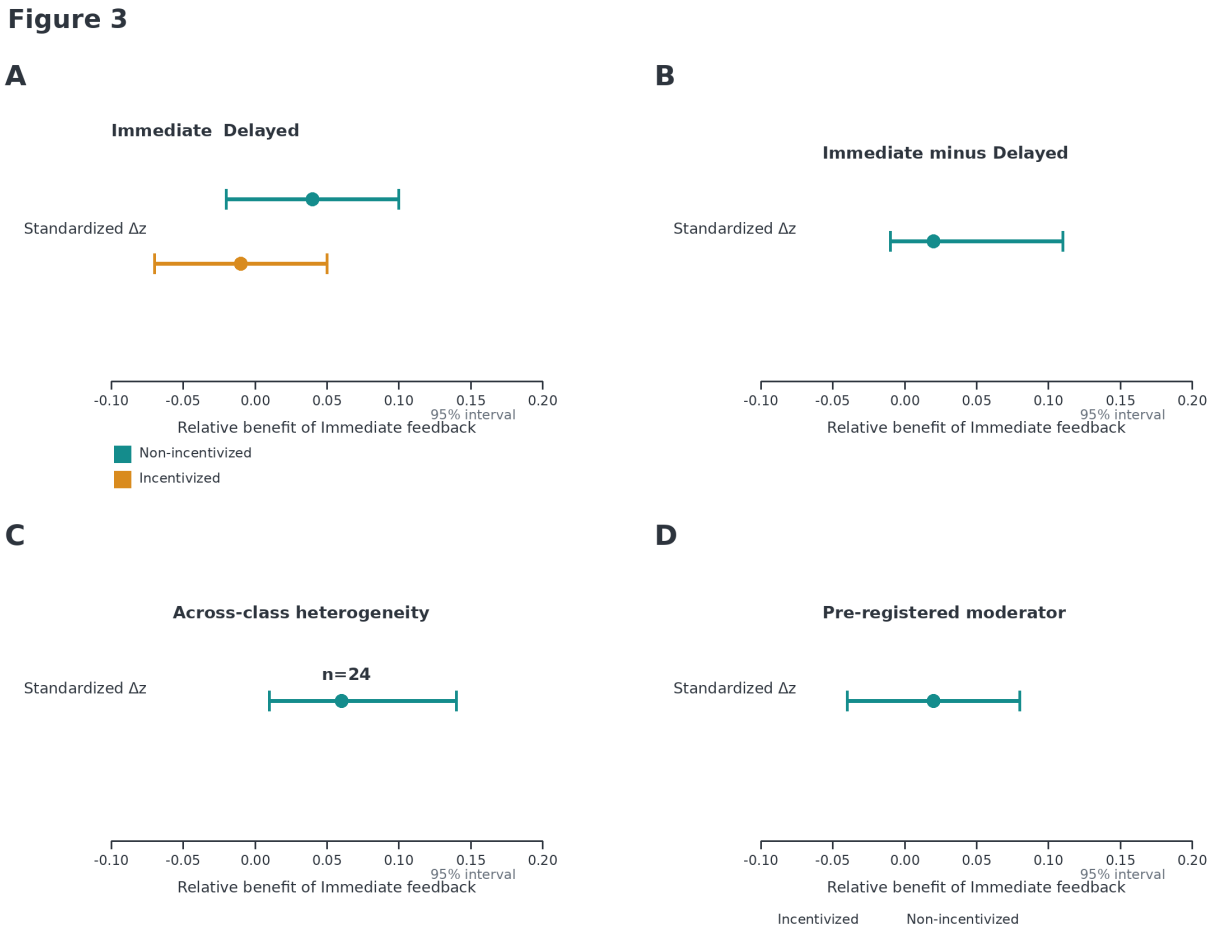

Measures

Standardized delta-z and 95% intervals are the figure display units. Source values remain in the separately approved analysis export.

Results overview

The text below is the current production wording and may require reconciliation with the approved analysis and accepted component scope.

Figure 3 — current production component

CAP-3A: teal=Incentivized and amber=Non-incentivized. CAP-3B: the overall 95% interval extends to 0.11. CAP-3C: across-class annotation n=42. CAP-3D: Incentivized precedes Non-incentivized; no exploratory marker.

Results: Figure 3

RS-3A: The incentive-condition comparison follows the cohort mapping stated in the caption.

RS-3B: The overall interval extends to 0.11 in the current production wording.

RS-3D: The moderator panel uses the pre-registered category order and standardized delta-z unit.

Heterogeneity analysis

The current prose retains the accepted discussion of between-class variation; the visible sample annotation is carried by the figure component.

Moderator analysis

Moderator reporting distinguishes pre-registered fields from exploratory markers.

Supporting information

SUP-F3 remains linked from the accepted record and is listed by stable content identifier.

Data availability

The linked repository concept is HVD-EDU-0147. A staged version may not release independently of the production proof.

Author notes

Corresponding-author and production approvals are maintained in the separate approval record.

References

References are retained from the accepted manuscript and supporting public-source provenance.

Production record

This proof remains a current production component pending completion of the open quality-review workflow.
