ManyClasses Feedback Timing Study

Accepted manuscript record

Manuscript ID: AM-2026-0147-v5

Accepted at: 2026-08-19T15:10:00+08:00

Figure baseline: FIG3-ACC-v5

This accepted state is retained as the publication baseline for version-controlled proofing.

Abstract

This multisite education study examines immediate and delayed feedback across varied college classes. The publication record reports standardized delta-z estimates with uncertainty intervals and preserves class and incentive-condition definitions.

Study design

Thirty-eight participating classes contributed de-identified outcome summaries. Feedback assignment was immediate or delayed, and incentive condition was recorded separately.

Measures

The primary reporting unit is standardized delta-z. Quantitative figure marks use medians and 95% intervals, with annotations and cohort encoding treated as part of the reported display.

Analysis

The accepted analysis workflow records class and condition estimates, both interval endpoints, moderator fields, and reproducible software lineage.

Results overview

Results are reported as presentation evidence and do not constitute a release-control decision.

Class-level estimates

Class-level variation is shown alongside condition summaries so that interval geometry can be traced to structured estimates.

Results: Figure 3

RS-3A: The incentive-condition comparison is interpreted using the cohort mapping stated in the Figure 3 caption.

RS-3B: The accepted overall interval extends from -0.02 to 0.05.

RS-3D: The pre-registered moderator panel uses the stated category order and standardized delta-z unit.

Robustness checks

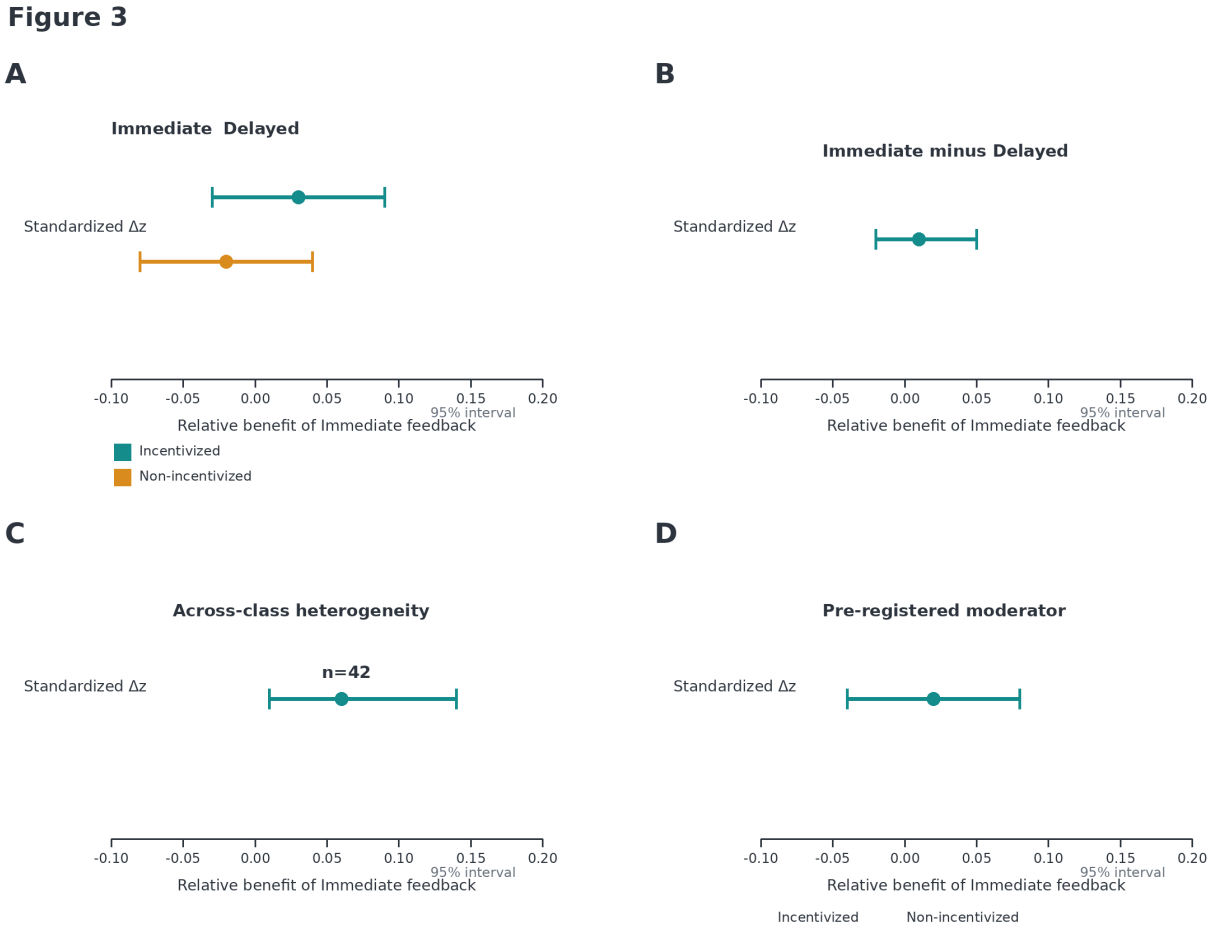

Sensitivity checks retain stable panel identifiers and separate scientific interpretation from production consistency review.

Supporting information

SUP-F3 — Figure 3 estimate export. Printed run label: AR-2026-08-18-R16. Linked export is identified separately in the accepted-set manifest.

Supporting records use stable content identifiers so a label revision can be distinguished from a linked-file replacement.

Figure 3 — accepted baseline

CAP-3A: teal=Incentivized and amber=Non-incentivized. CAP-3B: accepted interval endpoint is 0.05. CAP-3C: across-class annotation n=42. CAP-3D: Incentivized precedes Non-incentivized; no exploratory marker.

References and data availability

The accepted record cites persistent supporting-data identifiers and maintains prior versions as historical context.
